Dr. A. D. Kaiser  
Department of Biochemistry  
Stanford Medical Center  
Stanford, CA 94305

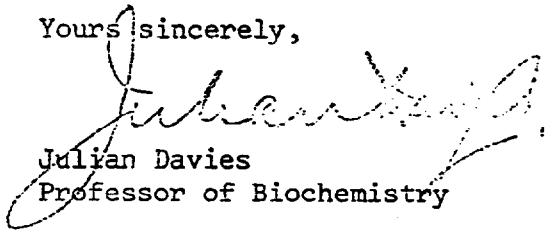

Dear Dr. Kaiser:

I am happy to recommend Iwona Stroynowski for your consideration as a graduate student or as a research associate. I have only known Iwona since October 1974, but she has done enough to convince me that she compares favorably with the best students I have known at Wisconsin.

She has been working with me on research problems concerning bacterial plasmids; and although she does not have a strong background in biology, Iwona has worked hard and learned quickly. I would have no hesitation in accepting her for continued training and research in my laboratory. She is extremely intelligent and self sufficient.

My one reservation concerns the amount of time she can spend in the laboratory; because of her young daughter she finds it difficult to work in the evening and on weekends. Iwona's husband is also a research scientist. Nonetheless this does not affect my assessment of her general qualities; Iwona is strongly committed to a higher degree and I recommend her with enthusiasm.

Yours sincerely,

Julian Davies  
Professor of Biochemistry
